

## Algorithm

**Step 1:** Start

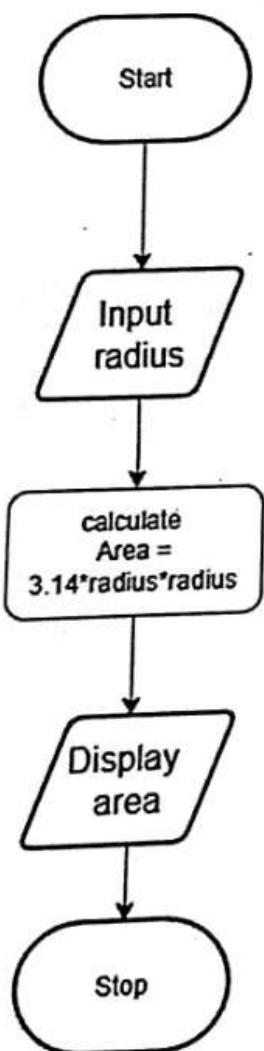

**Step 2:** Input the value of a (radius)

**Step 3:** Calculate area using the formula

$$\text{area} = a \times a \times 3.14$$

**Step 4:** Display the area up to 4 decimal places

**Step 5:** Stop

**CODETANTRA** [Home](#)

1.1.1. Area of Circle

Write a Python program that calculates the area of a circle when the radius is provided by the user. Use  $\pi = 3.14$  and display the area.

**Input Format:**

- A single line containing a floating-point number representing the radius.

**Output Format:**

- Print the computed area of the circle formatted to 4 decimal places.

Explorer `circlearea...`

```
1 radius = float(input())
2 area = 3.14 * radius * radius
3 print(f"area:{.4f}")
4
```

Average time: 0.003 s Maximum time: 0.003 s  
2.75 ms 3.00 ms 2 out of 2 shown test case(s) passed  
2 out of 2 hidden test case(s) passed

Test case 1 3ms  
Expected output: 3.14  
Actual output: 3.14  
35.4493 35.4493

Test case 2 3ms  
Expected output: 3.14  
Actual output: 3.14  
35.4493 35.4493
